

SAFETY FLARE

FIRE EXTINGUISHERS • SAFETY SUPPLIES

Spring has sprung!

With temperatures rising it is time to fix the leaks in time for monsoon season. Stop by to pick up a roofers kit to make sure you stay safely on the roof just in case the wind tries to push you off while making those roof repairs. We have roofers kits and other fall protection items in stock and ready to keep you safe while working on roofs or other high places.

Tips for using fall protection

- Inspect all equipment every time it is to be used
- Replace equipment if there is damage visible
- Store equipment in a cool dry area out of direct sunlight
- Be aware of the expiration date of the equipment
- Plan when and how you will use it

When should I use fall protection?

According to OSHA any construction worker is required to have fall protection any time the worker is working at a height of six feet or more. General industry standards are lower at four feet or more. For more information see the [OSHA Fall Factsheet](#).

Determining Proper Anchorage Point Height
